

SUMMER INTERNSHIP

Data Analytics & Forensic Technology

Virtual Internship & Job Simulation

Presented by: Akshit Garg 2410030375 (3CSE2)

BTECH CSE

IILM University, Greater Noida

Duration: 8 Weeks • May – June 2026

Internship Overview

A concise snapshot of the internship and its learning focus

8

Duration

8-week virtual internship conducted during May–June 2026.

C

Curriculum

Data Analytics and Forensic Technology curriculum provided via Job Simulation.

I

Institution

IILM University, Greater Noida.

INTERNSHIP FOCUS

- Building foundational understanding of data analysis workflows
- Learning how to visualize telemetry and operational data
- Developing awareness of ethical data compliance and forensics
- Connecting classroom programming concepts with industry-oriented tools

About the Job Simulation

Industry-aligned data learning environment

01

What is the Job Simulation?

It provides a practical environment where students handle realistic client scenarios, specifically building telemetry dashboards and investigating human resources data for unfair pay.

02

Why Data Skills Matter

Modern enterprises rely on data to make critical decisions. Translating raw, unstructured data into visual insights and classified reports is essential for both operational efficiency and corporate compliance.

03

Relevance to CSE / AI-ML

Logical functions, data classification, and data visualization form the bedrock of data science, directly supporting the pipelines required for software engineering and Machine Learning architectures.

Internship Objectives

What the internship was intended to develop

01

Data Fundamentals

Understand core concepts, terminology, and characteristics of telemetry and organizational data analysis.

03

Practical Thinking

Translate theoretical concepts into evidence-based problem solving and forensic investigations.

02

Tool Awareness

Become familiar with major data tools like Tableau and advanced Microsoft Excel capabilities.

04

Industry Readiness

Build foundational skills relevant to consulting, software, data, and AI/ML professional environments.

Data Analytics Fundamentals

Core concepts to understand before working with client datasets

01

Telemetry Data

Understanding automatically recorded operational data from machines, systems, or software.

02

Data Classification

Categorizing raw information into structured cohorts to enable accurate comparative analysis.

03

Logical Functions

Using programmatic logic (like IF statements) to evaluate data against specific criteria.

04

Visual Storytelling

Transforming complex datasets into charts and dashboards that non-technical stakeholders can understand.

05

Forensic Analysis

Investigating data to uncover anomalies, fraud, or compliance issues (e.g., unfair pay practices).

Core Project Domains

Three common focus areas of data consulting delivered in the simulation

Data Analysis

Exploring and aggregating raw operational metrics.

Example: Processing client telemetry files to extract meaningful operational trends.

Data Visualization

Providing a managed platform for stakeholders to view data.

Example: Building an interactive Tableau dashboard for client leadership.

Forensic Technology

Investigating sensitive data for ethical compliance.

Example: Adding classification columns to HR spreadsheets to uncover unfair pay.

Project Phases

Different approaches to organizing and executing the internship tasks

1

Phase 1: Telemetry Dashboard

Focused on transforming abstract machine data into a readable format. We processed the client's telemetry datasets to build a foundation for continuous operational monitoring and visual storytelling.

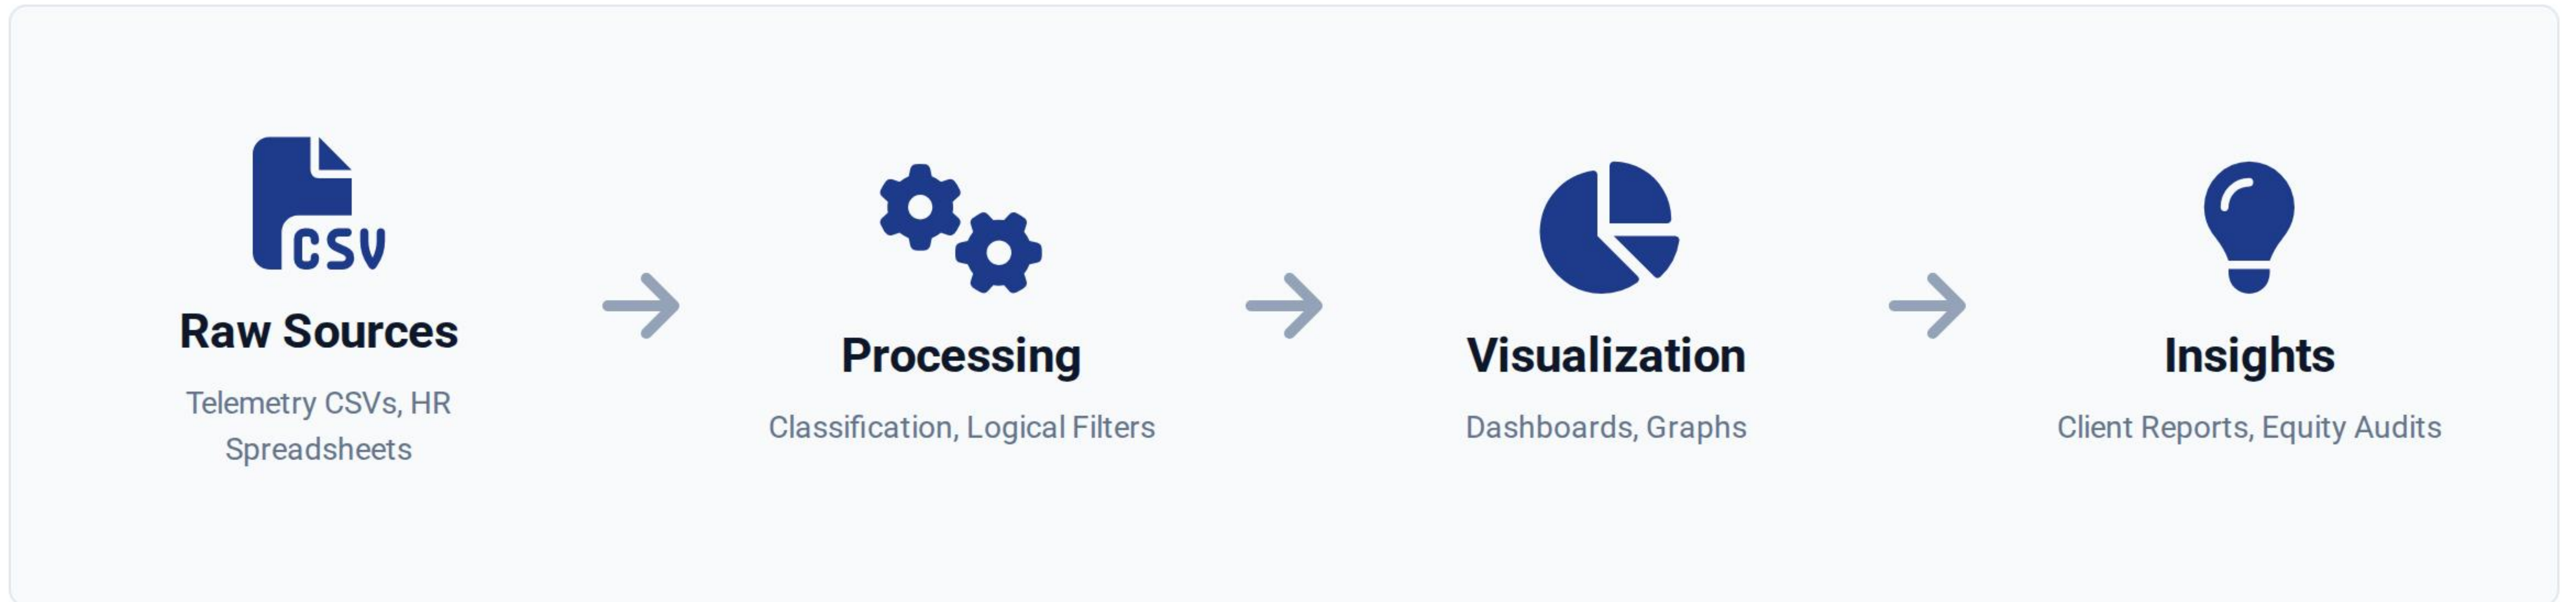

2

Phase 2: Forensic Technology

Shifted to data governance. Working with sensitive HR/Payroll data, this phase required rigorous logical classification (via Excel columns) to isolate cohorts and identify unfair compensation disparities.

Data Analytics Ecosystem

Major stages of the data lifecycle used during the project

Technologies – Reference Section

The primary tools and platforms utilized to complete the simulation objectives

01

Tableau

Used for data visualization, dashboard assembly, and time-series modeling.

02

Microsoft Excel

Used for forensic data classification, logical functions, and sorting.

03

CSV / XLSX Formats

The standard formats for raw telemetry and unclassified HR data ingestion.

Hands-on Activities / Tasks

Reference structure for documenting practical work

1 Task 1: Data Analysis (Telemetry)
Analyzed client data and created an interactive dashboard using Tableau.

2 Task 2: Forensic Technology
Helped the team investigate unfair pay by adding classification columns to an Excel sheet.

ADD EVIDENCE

- Insert screenshots of Tableau Dashboards / Excel formulas here
- Mention the specific datasets processed for each activity
- Highlight the final visual outcomes presented to the simulated client

Skills Acquired

Technical and professional learning from the internship

1 Data Visualization (Tableau)

2 Data Classification (Excel)

3 Forensic Analytical Thinking

4 Technical Documentation

5 Industry Awareness

6 Professional Learning

Challenges & Learning

A reflection section to personalize with actual internship experience

01

Challenge

Handling unstructured, raw telemetry data and dealing with complex nested logic required for accurate HR data classification without distorting original datasets.

02

Approach

Methodically broke down the classification requirements, utilized software documentation for complex functions (IF/VLOOKUP), and iteratively tested Tableau visualizations.

03

Learning

Developed immense confidence in handling real-world data scenarios, realizing that effective data science is equal parts technical tool mastery and logical problem-solving.

Internship Outcomes & Future Relevance

How the experience connects with your academic and career growth

KEY OUTCOMES

- Developed a foundation in data analytics and visualization.
- Gained exposure to industry-oriented forensic investigations.
- Improved technical problem-solving and self-learning ability.
- Built knowledge that can support future software, data, and AI/ML projects.

→ Next Steps

- Explore advanced Tableau features
- Practice Python/SQL for larger data pipelines
- Learn data engineering architecture
- Apply data skills to AI/ML workloads
- Consider relevant data analyst certifications

Internship Completion Certificate

Certificate received for successful completion of the Data Analytics Job Simulation

Deloitte.

Akshit Garg

Data Analytics Job Simulation
Certificate of Completion

June 17th, 2026

Over the period of May 2026 to June 2026, Akshit Garg has completed practical tasks in:

- Data analysis
- Forensic technology

T. McCreery

Tina McCreery

Chief Human Resources Officer,
Deloitte

Enrolment Verification Code YdBg8dDxM2z7jmNTp

User Verification Code 6a049389a3ac894c700c6c32
